

Vita Feed Nutri

Vita Feed Nutri is a protein-rich feed that boosts honey bee health, increases brood area and increases honey production. Vita Feed Nutri is a rigorously tested, GMO-free nutritional supplement that can be used at almost any time of year to promote controlled colony growth. Vita Feed Nutri is scientifically formulated and packed with an optimum blend of vitamins and crude amino acids specifically developed to boost your bees.

Key Facts

Stimulatory pollen-rich for honey bees

Promotes controlled population growth, corrects nutritional deficiencies and extends bee lifespan

Boosts brood rearing, leading to stronger colonies and increased honey production.

It is safe and effective for use at any time of the year, even during a summer gap.

What is Vita Feed Nutri

Vita Feed Nutri is a nutritional supplement promoting controlled population growth.

Packed with easily digested proteins to correct nutritional deficiencies

For use at times of low-quality pollen to stimulate increased honey production

A pollen substitute that increases bee lifespan

How Vita Feed Nutri Helps

Honey bees need protein, but not all pollen has the same protein content. Vita Feed Nutri ensures that bees have sufficient protein to enable healthier colony development and thereby increasing honey production. The year-round suitability and simplicity of applying the feed in syrup makes it an ideal product for any beekeeper wanting to keep healthier and more productive bees.

Rigorous trials in different countries have shown the remarkable effects of using the Vita Feed Nutri supplement. Studies show that bees increase their pollen consumption by 50% when the percentage of protein in the pollen drops from 30% to 20%. When protein content drops bees turn to their own body reserves. This in turn reduces their lifespan, their brood-rearing capability and therefore the development of the colony. Vita Feed Nutri compensates for protein deficiencies.

When to Use Vita Feed Nutri Pollen Supplement

Vita Feed Nutri can be used throughout the beekeeping year:

For early development

For faster colony build up, use Vita Feed Nutri to support colony development when there is a lack of pollen

In readiness for the honey flow

For increased honey production, use Vita Feed Nutri to stimulate increased egg laying and boost colony growth

During foraging gaps

Keep colonies strong and productive by using Vita Feed Nutri during temporary summer pollen gaps. When nectar is flowing but there is a temporary lack of quality (vitamin and amino-acids) pollen, the powder should be sprinkled onto brood frames. Extensive tests have shown that application in this way does not contaminate honey.

In preparation for winter

Increase winter survival rates by feeding with Vita Feed Nutri

How to Use Vita Feed Nutri

Vita Feed Nutri is available in a 500 gram pack sufficient to feed approximately 16 colonies. In spring and autumn it can simply be diluted with sugar syrup and feed to your bees, following the label directions. Vita Feed Nutri can also be used during the honey flow by sprinkling the powder on top of the brood frames when installing, adding and removing super frames.
